## FINAL EXAMINATION

TRIMESTER 3, 2017/2018

### BFN2094 – CORPORATE RISK MANAGEMENT

( All sections / Groups )

06<sup>th</sup> JUNE 2018  
2.30 p.m – 4.30 p.m  
( 2 Hours )

---

#### INSTRUCTIONS TO STUDENTS

1. This question paper consists of SIX (6) printed pages with four (4) questions and financial tables only.
2. Attempt ALL questions.
3. Please write all your answer in the **Answer Booklet** provided.
4. Marks are shown at the end of each question.

There are FOUR (4) questions in this section. Answer ALL questions.

**Question 1 (25 Marks)**

- (a) What are the most important characteristics of pure risk as compared to other types of risk?  
(5 marks)
- (b) Assume that you are part of a risk management team in Excel Sdn. Bhd. The team is currently working on planning a risk management strategy to manage the potential losses from workers' injuries at its main manufacturing plant in Cyberjaya. Provide a brief outline of the steps in the risk management process.  
(5 marks)
- (c) Describe specific factors included in the cost of risk for the risk of lawsuits resulted from the business's release of toxic chemicals that damage the environment. Please include specific examples for each of the components of costs of risk.  
(15 marks)

**Question 2 (25 Marks)**

- (a) Mardi and Simran plan to enter into a pooling arrangement. However, they are unsure if it is a good idea. Assume that both women have the following loss distribution and that losses are independent.

Possible outcomes ( $x_i$ )	Probability ( $p_i$ )
RM 0	0.9
RM 3,500	0.1

- i. Prepare a probability distribution table *after* the risk pooling.

(4 marks)

Continued...

- ii. Calculate the expected loss *before* and *after* risk pooling.

(4 marks)

- iii. What happens to the *expected loss* and *standard deviation* of the distribution of losses to each individual after the pooling arrangement? Briefly comment.

(4 marks)

- iv. Do you think it is a good idea to proceed with the plan? Briefly explain.

(2 marks)

- (b) Leon Fashion Sdn. Bhd. offers its employees medical benefits. The probability distribution for the medical costs is as follows:

Losses (RM)	Probability (p)
100,000	0.005
60,000	0.010
20,000	0.020
10,000	0.050
0	0.915

- i. Compute Leon's expected claim costs for a full insurance policy.

(4 marks)

- ii. What is the expected claim cost for a policy with RM5,000 deductible, 20% coinsurance and a RM80,000 limit?

(4 marks)

- iii. If the only administrative cost is the cost of processing an application which equals RM100, what should be the fair premium based on the expected claim cost computed from part (ii)?

(3 marks)

Continued...

**Question 3 (25 Marks)**

- (a) Loss control typically involves an expenditure of effort, money and/or time. Suppose Khaled Bhd. is deciding how much to spend to make its workplace safer. The risk management team were informed that there are a total of 6,000 employees in the company. The average severity of accidents is RM30,000. If the company chooses to do nothing on safety control, the annual frequency is forecasted to be 11%. However, if the company spends RM1 million, the annual frequency falls to 10%. If the company spends RM2 million, the frequency declines further to 9%. The details are summarized in the following table.

Safety Expenditure (RM)	Accident Frequency per employee	Expected accident cost per employee (RM)
0	0.110	3,000
1,000,000	0.100	2,500
2,000,000	0.090	2,200
3,000,000	0.083	2,000
4,000,000	0.072	1,900
5,000,000	0.065	1,800
6,000,000	0.058	1,700
7,000,000	0.043	1,600

- i. Perform marginal cost-benefit analysis to determine the optimal safety expenditure for Khaled Bhd. (15 marks)
  - ii. Based on the analysis in part (i), ignore the time value of money, how much would be the maximum loss control expenditure Khaled Bhd. may spend on loss control? Why? (3 marks)
- (b) Semangat Sdn. Bhd. plans to improve its workers' safety by sending them for training. The company will enjoy rebates in premium by the insurance company if the workers completed the training course (assuming that the only benefits of the training is the insurance premium rebates). The firm has a total of 150 workers and the cost of the training course for each is RM1,000. If all of the workers enrol in the course immediately, the company will enjoy a rebate of RM60,000 in the company's insurance premium this year and rebate of RM40,000 in each of the subsequent 3 years. The cost of capital is 5%. Should you recommend Semangat Sdn Bhd to proceed with the plan? Why?

(7 marks)

Continued...

**Question 4 (25 Marks)**

- (a) Optimal risk retention or reduction decisions would consider the costs and benefits of reducing risk. Assume that Company X and Company Y are identical in all aspects except that Company X is in a growing industry while Company Y is in a declining industry. Which of the company will benefits more from **risk reduction** strategy such as insurance purchase? Why?  
(6 marks)
- (b) Assuming risk reduction is appropriate, companies need to decide where to focus their risk reductions activities. Companies have the option to manage their risk exposure by adopting either aggregated or disaggregated approach.
- i. Briefly explain the differences between aggregated and disaggregated approach.  
(8 marks)
- ii. What are the important considerations companies should take in deciding between disaggregated, or aggregated approach?  
(8 marks)
- iii. Based on the discussion in part (ii), which of the approach would you recommend?  
(3 marks)

**End of Page**
